

Postdoc Training in Gene Regulation of HIV-1 Latency and Cure

A postdoctoral training position is available in the laboratory of <u>Dr. Ivan D'Orso</u>, in the <u>Department of Microbiology</u> at UT Southwestern Medical Center* to study transcriptional regulatory mechanisms shaping HIV-1 latency and reactivation. <u>The D'Orso Lab</u> has many exciting, ongoing projects related to the transcription and epigenetic regulation of HIV-1 latency. We are seeking a highly motivated individual, interested to investigate various basic aspects of HIV-1 latency and reactivation, as well as engage in new HIV-1 cure efforts. To this end, we are using a multidisciplinary approach including cellular and molecular biology, chemical biology, virology, and genomics. The Department of Microbiology provides a dynamic, collaborative, and integrative research and training environment with state-of-the-art facilities.

Information on our postdoctoral training program, benefits and a virtual tour can be found at http://www.utsouthwestern.edu/postdocs

Candidates must hold a Ph.D. in biochemistry, molecular biology, or related fields, with a strong background in molecular and cellular biology, virology, and/or genomics. The candidate should have a strong publication record in quality peer-reviewed journals, demonstrated creative thinking, be able to work independently and have the ability to work collaboratively in a team. Please submit a CV or resume, brief statement of interests and accomplishments, and a list of three references in one .pdf or .doc file by e-mail to:

Iván D'Orso, PhD

Email: ivan.dorso@utsouthwestern.edu
